

Inspect Pitfalls of Team 1 “Techware”

Inspector: Paul Moreno, team 3 “ theEncoders”

- You have class Explosion, all the classes Edit they can be one class that contains method save, read, modify files, and they receive parameters.
- In the class ModifyProduct you have Conditional complexity. in the method addProductStock and createProduct.
- In the class ModifyEmployee has the same Conditional complexity in the method createEmployee.

Recommendation:

Reducing the number of classes for the edit method, several methods has Conditional complexity, in the program the biggest pitfall is the Conditional complexity that's making the methods too long.
